

Environmental Policy

Westbuilt Homes specialises in designing and building custom modular homes for delivery to QLD and Northern NSW.

As such, and given the enduring nature of Westbuilt Homes operations, our company has substantial control and influence over environmental aspects both presently and into the future. In order to achieve our environmental aims, we have established an integrated management system, which incorporates the requirements of ISO 14001:2015 standard for Environmental Management Systems.

We recognise the importance of minimising impact upon the environment and strive for environmental excellence in all our activities, striving to achieve environmental excellence in prevention of pollution, which we commit to.

In order to prevent pollution and continually improve our environmental performance, Westbuilt Homes maintains the following overall environmental objectives:

- Compliance with all legal requirements, the requirements of ISO 14001:2015, regulations, industry codes and standards, and other relevant requirements, making adequate provision of resources to meet these requirements.
- Prevention of pollution in relation to air, water, land, biodiversity, and cultural heritage
- Minimisation of use of energy and materials.

With these overall aims in mind, Westbuilt Homes has established environmental aspects and their impacts which the integrated management system is designed to achieve.

Westbuilt Homes is committed to ensuring that this policy is reviewed for continuing suitability at IMS management reviews and that it is communicated to and understood by all workers. It is also made available to the public via display at the company headquarters.

David Westerman
